PORTFOLIO

https://jacob-porfolio.vercel.app

github.com/Chvine

TECHNICAL SKILLS

- Programming & Scripting Languages
- Frontend Frameworks & UI/UX Design
- Backend, APIs & Real-Time Technologies
- Databases & Data Storage
- Systems Architecture & Business Logic
- Developer Tools & Deployment

PROGRAMMING LANGUAGES, TOOLS & FRAMEWORKS

- Java
- Python
- Flutter
- PHP | MySQL | JavaScript
- GitHub | Vercel | Cloudflare Pages
- Bootstrap | Next.js | React.js
- Figma | Canva

CORE WORK SKILLS

- Problem Solving
- Computational Thinking
- Work Ethics
- Teamwork & Collaboration
- Flexibility & Agility
- Willingness to Learn

PROFILE SUMMARY

I am an IT student specializing in System Development at PHINMA Cagayan de Oro College, with hands-on experience building web and desktop applications using Python, Java, JavaScript, Next.js, PHP, and MySQL. As a collaborative problem-solver, I have successfully designed and deployed projects like an integrated Hotel Billing System, a serverless e-commerce platform, and lightweight cashiering apps. I am eager to join a forward-thinking engineering team where I can expand my full-stack skills and build impactful software solutions.

EDUCATION

BACHELOR OF SCIENCE IN INFORMATION TECHNOLOGY

PHINMA Cagayan de Oro College| June 2024- April 2027

- Specializing in System Development

CERTIFICATION

OPERATING SYSTEMS BASICS

- Cisco Networking Academy | November 2026

PROJECTS

HOTEL BILLING SYSTEM

Academic Project | Jan 2026 – Present

Next.js | React | PHP | MySQL | WebSocket | QR Codes | Tailwind CSS | Git

Designed and developed an integrated hotel and restaurant management platform to streamline operational workflows between front-desk staff, dining cashiers, and guests.

- Generates a QR-code check-in pass that opens a private guest portal displaying live folio billing, dining orders, and room service requests.
- Cashier workflow equipped with manager approvals, statutory VAT and discount policies, group check-in, and multi-channel payment processing via Cash, Card, GCash, Maya, and QR Ph.
- Implements role-based permissions, comprehensive audit trails, and real-time WebSocket staff alerts.

BARANGAY CANITOAN CIVIC INFORMATION PORTAL

Academic Mini-Project | Jul 2026

HTML5 | CSS3 Grid & Flexbox | Vanilla JavaScript | Glassmorphism UI | Cloudflare Pages

Designed, developed, and deployed a modern municipal web portal to improve civic information access for residents of Barangay Canitoan, Cagayan de Oro City.

- Features 8 dedicated public service modules detailing requirements for Barangay Clearances, Certificates of Indigency, and Business Permits.
- Integrated mobile tap-to-call directory for 24/7 emergency hotlines (Police, BFP, CDRRMO).
- Includes an interactive lightbox community photo gallery and embedded interactive zone maps.

BRAINGLE RIDDLE GAME

Group Project | Sep 2023

Python | Text-Based Gaming | Control Flow | Algorithmic Logic

Designed and developed an interactive text-based puzzle game to challenge critical thinking and deduction through sequential riddle challenges.

- Features a sequential riddle progression engine with real-time text input validation.
- Hint penalty scoring system and progress tracking.
- Dynamic conditional branching with escalating difficulty levels based on player performance.

LENDING MANAGEMENT SYSTEM

Group Project | March 2023

Java | Java Swing GUI | AWT | OOP Principles | Data Management

Designed and developed a desktop graphical software application to assist micro-lending operators in tracking borrower accounts and payment schedules.

- Features structured GUI forms for borrower onboarding, contact management, and loan account registration.
- Automatically calculates interest rates, amortization plans, and remaining balances.
- Tabular records interface for reviewing transaction histories and outstanding debts.

COZIER E-COMMERCE PLATFORM & ORDER TRACKER

Personal Project | Oct 2026

JavaScript (ES6+) | HTML5 | CSS3 | Cloudflare Pages | Cloudflare Workers & KV | REST API

Designed, developed, and deployed a minimalist e-commerce web application engineered for an independent apparel brand in Cagayan de Oro.

- Features a dynamic shopping bag state engine calculating real-time taxes, free delivery thresholds, and flexible promo code discounts.
- Serverless order intake and lookup dashboard powered by Cloudflare Workers and Key-Value (KV) edge storage.
- Built with a zero-hardcoding configuration pattern that separates product catalogs from core business logic.

J AND J FULL SUBLIMATION PRINTING ORDERING SYSTEM

Academic Project | 2025 – 2026

Java | Java Swing GUI | AWT | Systems Architecture | File & Database Management

Designed and developed a custom apparel ordering and production tracking system for a full sublimation printing business to digitize customer intake.

- Captures custom apparel orders detailing garment types, multi-size matrices, quantities, and graphic design specifications.
- Provides order status tracking across stages from intake, printing, and heat-pressing to final release for staff and customers.
- Features an administrative module for managing customer records, order histories, and print production queues.

JUNGLE SLOT MACHINE GAME APPLICATION

Academic Project | 2026

JavaScript | HTML5 | CSS3 | Game Logic Design | Responsive UI

Designed and developed an interactive casino-style slot machine game delivering an engaging user experience with jungle-themed visuals.

- Features responsive reel-spinning gameplay mechanics and randomized symbol outcome algorithms.
- Dynamic bet scaling, automated balance deductions, and winning combination payout calculations.
- Intuitive, responsive user interface optimized for smooth interaction across desktop and mobile devices.

SNAPZONE: PHOTOBOOTH RESERVATION & MANAGEMENT SYSTEM

Academic Project | Feb 2025

PHP | MySQL | Flutter | Dart | Tailwind CSS | Ratchet WebSocket | REST APIs

Designed and developed an end-to-end event photobooth booking and business management platform featuring client-facing reservation workflows, real-time messaging, and an accompanying mobile application.

- Created a guest booking engine with dynamic package selection, event type classification, and automated surcharge calculations for corporate, out-of-town, and large-scale events.
- Implemented an administrative owner dashboard equipped with an interactive booking calendar, payment verification workflows, customer history tracking, and revenue analytics.
- Integrated real-time client-to-owner chat via Ratchet WebSockets alongside a cross-platform Flutter/Dart companion mobile application.

LANGUAGE LEARNING WEB

Group Project | April 2025

HTML5 | CSS | JavaScript | Responsive UI

An accessible educational web application providing structured vocabulary units, phonetic flashcards, and self-assessment modules.

- Structured lesson modules categorized by topic, grammar fundamentals, and proficiency level.
- Interactive flashcard flip animations for active recall and vocabulary retention.
- Progress tracking within the learning session with an intuitive, responsive interface
